Verifying Notification Settings

[view online](#)

The following settings should be verified prior to putting them into effect:

- SNMP trap configuration
- Syslog profile configuration
- Email profile configuration
- SMTP configuration

Verification is manifested in the UI in several places. In the Notifications tab under Operations, notice the question mark icon to which the red arrow points in the below screenshot.

Clicking the icon causes one of three dialog boxes to pop up, depending upon the sub-tab chosen, be it Syslog, Email (in the above screenshot), or SNMP Trap.

The dialog box is titled 'Validate Email SMTP Settings'. It contains the following fields:

- To***: A text input field with the placeholder text 'j@foo.com, b@foo.com, etc.'.
- Cc**: A text input field with the placeholder text 'a@foo.com, b@foo.com, etc.'.
- Subject***: A text input field with the placeholder text 'Subject'.
- Body***: A large text area for entering the email body.

A 'Submit' button is located at the bottom of the dialog.
