# Cisco APIC Support in Avi Vantage

[view online](#)

Avi Vantage supports integration with Cisco Application Centric Infrastructure (ACI). Avi Vantage's Controller-led architecture de-couples the control plane and the data plane. This architecture makes it possible for the Controller to automate the L4-L7, where as the ACI provides L2-L3 network automation for Service Engines.

The following table provides a comprehensive list of links to documentation for Cisco ACI integration with Avi Vantage:
