Function `avi.vs.table_refresh([table_name,] key [, lifetime_exten])`

Description Refreshes the lifetime of the entry for the key in the key/value store.

Events HTTP_REQ
HTTP_RESP

Looks up the key in the default VS table, unless another table name is specified via the optional *table_name*.

The key is used to search for the desired table entry.

Parameter The optional *lifetime_exten*, a positive integer, is the value in seconds by which to extend the lifetime of the entry in the key/value store. When it is not specified, the default value of 300 seconds is used to extend the lifetime of the entry.

Returns Boolean *true* upon refresh success and *false* upon refresh failure.

Note The key/value entry will be removed from all Service Engines hosting the VS.

Example TBD
