# Avi Controller Events Log

[view online](#)

The Administration > Controller > Events page lists Avi Controller-related events.

The following example shows details for an SE\_DOWN event, indicating that an Avi Service Engine (SE) has gone down.

The screenshot shows the 'Administration' page with the 'Controller' tab selected. The 'Events' section is active, displaying a search bar, a 'Total 32 Events' summary, and a bar chart. Below the chart is a table of events. The first event is highlighted in green and shows an SE\_DOWN event for a Service Engine at 10.10.22.138. The details for this event are expanded, showing the following information:

```

se_details
name: 10.10.22.138
se_grp_name: Default-Group
vs_name
  0: vs1
cloud_name: Default-Cloud
reason: Avi Service Engine powered down
memory: 2001
vcpus: 2
    
```
