Profiles

[view online](#)

Avi Vantage relies on Templates and Profiles to group together collections of settings into a single, reusable object. A profile may be used by multiple objects such as Virtual Services referencing the same TCP Profile. By making a change to the TCP Profile, all associated Virtual Services will inherit the change.

Avi Vantage supports the following Templates and Profiles:

- [Application Profile](#)
- [TCP/UDP Profile](#)
- [Persistence Profile](#)
- [Health Monitor Profile](#)
- [Analytics Profile](#)
