DataScript

Function avi.http.status()

Description Response status code that will be sent to the client. This may be different than the status code sent back from the server as a DataScript could override. See the example for avi.var.server_status.

Events HTTP_RESP

Parameter None

Returns String of the status code, such as 200.

Example

```
if avi.http.status() == "400" then
    avi.http.response("404")
end
```
