Load Balancing Horizon View using Avi Vantage

[view online](#)

Overview

Avi Vantage (VMware NSX Advanced load balancer) is a software-only ADC which offers enterprise grade load balancing, web application firewall and other application services in multi cloud environments. Avi Vantage offers a distributed architecture with separate control plane and data plane.

Starting with 18.2.7 release, Avi Vantage can be deployed for load balancing Horizon View deployed on premises in vCenter or VMware Cloud (VMC). Avi Vantage provides a full feature load balancing for Horizon for multiple deployment scenarios, including GSLB for multi-site deployments.

This following table provides a list of articles that discuss the design options, the configurations required for load balancing Horizon as well as GSLB for multi-site deployments:
